

Pacific Controls paves innovation via smart initiatives

Khaleej Times, United Arab Emirates - June 10, 2016

Pacific Controls recently established a Center of Excellence for Government Digital Services and Lifestyle

Pacific Controls will soon unveil video Surveillance as a service and aims to take the security market to the cloud facilitating enormous amount of storage and facilitating access from anywhere anytime, according to Dilip Rahulan.

“The year 2016 has been quite a start for Pacific Controls. We have pioneered the concept of managed services using IoT as the medium. We continue to grow the concept and provide various managed services such as Energy Management, Life and safety, Machine Diagnostics, Critical Asset Monitoring and many more. We tend to be a one stop shop, thus providing an end to end solution right from the edge to the enterprise,” he added.

In the UAE, some of Pacific Controls’ flagship projects include 24X7 Dubai Civil Defence, Emirates Energy Star, ICT projects in Dubai International Airport and Dubai South and Critical Asset Monitoring for Emaar.

“We are introducing some new concepts into the Dubai Civil Defence project. It is one of our key deliverables to improve the programme on a regular basis. We have identified some very innovative services that can be included which will be delivered soon,” Rahulan said.

Apart from the controls and managed services business, the Dubai Technopark-headquartered company has diversified into Datacentres. Pacific Controls own and operate one of the region’s largest datacentre that’s

certified as Tier III by uptime for design as well as construction. In addition to the whitespace we also have our cloud hosted there.

“We are a proud UAE based home grown company, with dedication to make our services and smart services programme successfully delivered worldwide. We don’t see these engagements purely from a business relation aspect, but much beyond that- where we feel obligated to deliver unique and innovative solutions to help achieve the vision presented by leadership of our country,” Rahulan said.

Pacific Controls recently established a Center of Excellence for Government Digital Services and Lifestyle with the objective to partner with governments and other stakeholders to facilitate adoption of digital technologies to revolutionise the way people, businesses and governments interact.

The Center brings together a list of global technology companies who are focused in accelerating the implementation of numerous digital technologies, such as networks, cloud services, big data analytics, Internet of Things, social media, next generation digital enablement and other disruptive technologies to help optimise the digital government infrastructure and processes, and further enhance digital lifestyle of people.
